

# rightclearing by restorm.com

The right-clearing system restorm developed is creating a new way for musicians to sell the rights of their music to people and companies looking for songs for use in movies, documentaries, commercial spots, games etc. and have everything fixed in a contract on a simple and easy way.

What makes the system unique is not only the automated procedure to negotiate the complete contract but the scope of different possibilities given to the artists and producers.

The artist can decide for every single song and choose between:

- traditional „**Copyright**“ (C)
- the modern system provided by „**Creative Commons**“ (CC)
- decide that a work shall be completely free and in „**Public Domain**“ (PD)

b-to-c	\$ - rightclearing	free use
b-to-b	\$ - rightclearing	\$ - rightclearing-selectionpool

Artists can not only choose a different licence for any song but also get the opportunity to earn money in all of the different copyright concepts. Even the prices can be set by the artist. Producers afterwards can define the project they want to use the song for and licence the song right away.

## Advantages of restorm's rightclearing system

- No focus on a single concept, but possibility to choose (C, CC, PD) without any lawyers costs
- **Easy, free, flexible** and **full automated** way to earn **money** and get a proper **license agreement**
- **Artist:** earn money / **Producer:** easy, cheap and fast licencing for use of songs
